

Class Research Project: General Guidelines

Goal is to perform an analysis and interpretation of remote sensing data (and/or retrieval techniques) in a well-defined problem.

Your paper (about 20- 25 pages) should include:

- Introduction (describing importance of your research topic and defining your goals and approach)
- Section describing technical characteristics of satellite remote sensing instrument(s) used in your study
- Section explaining the major components of the retrieval algorithm (ATBD)
- Section showing your analysis of remote sensing data and results
- Summary section
- References
